

UPPER COLUMBIA CORE METRICS BY ACTIVITY TYPE

Activity Type	Reporting Code	Unit	Description
Acquisition, Easements, Leases	Land, wetland or estuarine area protected from degradation or development	Acres	Land, wetland or estuarine area protected from further degradation or development through purchase, lease, negotiated agreement, or other mechanism. The acreage reported should be the total acreage protected regardless of whether all the habitat is applicable to the desired goals for acquisition.
	Streambank or riparian protected	Miles	Miles of streambank protected by acquisition, easement or lease.
Fish Passage	Fish passage blockages removed or altered	Qty	Anadromous salmonid passage blockages, impediments or barriers that are removed or altered to allow or improve passage.
	Miles upstream made accessible	Miles	Total length of potential anadromous salmonid bearing stream made accessible upstream of the passage impediment. If there is another barrier upstream, then the length made accessible would be to that next upstream barrier.
Fish Screen	Fish screens installed or modified	Qty	Number of screens installed, replaced, repaired or modified.
Instream Flow	Miles of stream protected for adequate flow	Miles	Length of potential anadromous salmonid bearing stream that is intended to have sufficient water flow for spawning and rearing (i.e., 'protected' for adequate flow) as a result of decreased/eliminated water withdrawals or reduced future water withdrawals. NOTE: please indicate the number of miles where flow is improved as a result of the project even if it is still not considered "adequate" flow.
	Water leased or purchased	cfs	Purchase of water rights. These water allocations are not withdrawn from the stream. (Water volumes proposed and actually leased or purchased should be reported in CFS to nearest 0.01 CFS.)

UPPER COLUMBIA CORE METRICS BY ACTIVITY TYPE

Activity Type	Reporting Code	Unit	Description
Instream Habitat <i>(NOTE: also includes Floodplain and Off-Channel Reconnection Projects)</i>	Acres of channel/off-channel connected or added	Acres	Acres of channel/off-channel connected or added. NOTE: Please use this metric for floodplain acres re-connected.
	Channel reconfiguration and connectivity: off-channel stream created	Miles	Channel reconfiguration and connectivity: off-channel stream created
	Total length of instream habitat treated	Miles	Total length of stream treated. This is a meander measurement of the portion of stream treated by the project. Multiple treatments in the same stretch of stream would only be counted once, so that the total reflects actual stream length subjected to treatments regardless of how many different treatments were applied.
Riparian Habitat	Total riparian area treated: acres	Acres	Total acres of streambank riparian area treated and total amount of riparian area treated or managed. Report the actual length of streambank riparian area treated, adding lengths of treatment on both sides of stream if treatment was on both streambanks.
Upland Habitat	Total acres of upland habitat treated	Acres	Total amount of upland habitat treated.
Water Quality	Total amount of water treated	Acre Feet	Total amount of water treated for water quality.
Wetlands	Wetland improvement/enhancement	Acres	Improvement, reconnection, or restoration of existing or historic wetland (other than vegetation planting or removal)
